School: SHIOCTON HI

District: SHIOCTON

City: SHIOCTON **State:** WI - Wisconsin

Survey Dates: Feb 1 2007 through Feb 28 2007

Condition: Forward-Thinking, Shared Vision

Indicator: Digital-Age Vision for Learners

Question: Describe your district's vision for education technology:

... we love it...technology is great! we have wonderful technology at shiocton high school

Question: Describe your school's vision for education technology:

... I think our school's vision is that teachers will select the most appropriate technology to support an education for all students. It is expected that students will be well prepared for the "real world", whether it is college, technical college, or a job that each student chooses.

... There are varying visions. I am not sure what the actual vision is. Some see no need for advanced technology, others are determined to advance in the field of technology.

... None that I'm aware of and non is published in the Staff Handbook.

... Our school provides technological opportunities for students, staff, and community members (computer labs) ... teachers all have a computer in classrooms (lesson planning, attendance, grading,internet,communication networked). Labs in science afford additional opportunities for students to collect data, graph data, interpret data ... we lack a unified "vision"

... Provide the technology, but does very little to push for its use in the class room

... I believe our district is doing the best they can with limited resources and budgets.

... I feel that we as a district focus too much on the physical components of technology just so we can say we have it in our school, and not enough on how to use it so it is beneficial to the kids.

... We supposedly have a plan, but nothing ever seems to come of it. We are never made aware of progress towards the goals or how to implement technology use to achieve the goals.

... In it's infancy and somewhat unrealistic. If teachers are to incorporate technology more time must be allowed for collaboration and personal development

... Our school's vision for education technology is to prepare our students for the 21st century in the work place.

... I am not aware of what the vision is.

... The district is committed to incorporating technology into the classroom and providing our students and staff with the latest advancements in this field.

... My school's vision for education technology is simply that students become more technologically aware of the various resources used in the real world today. Oftentimes, students' interests and overall excitement increases when technology is used more frequently.

... I don't know the vision.

... don't know

... Our district administrator has not provided effective leadership by not being very well versed in technology himself and he needs to come a long way to catch up with the rest of the staff. He is not a good example for the rest of us. Our technology people are very good with helping us to have technology in our schools and have given us educators a good vision of the technology and keeping us current with any new technology.

... It is definitely in the process and is a major focal point for future endeavors.

... Up to par.

... The school's vision is to prepare its students for the future by providing the necessary skills to ensure that they will be technologically literate, competent, self-reliant, and productive citizens. Through the effective use of technology, the school will offer the students, staff, administration and community members the opportunity to develop lifelong learning skills.
